**HARTFORD, Wis.** – E-Image Data Corp. announced today the release of the Auto-Scan™ software which provides Automatic Scanning for microfilm. This optional Auto-Scan™ plug-in software for the ScanPro 1000, says Westoby, president, e-Image Data, adds a button right on the standard toolbar that turns any ScanPro 1000 with a motorized roll film carrier into an automatic, unattended scanner for roll film. That means, adds Westoby, that with the addition of Auto-Scan™ you have both the standard ScanPro 1000 that can be used as a reader, a reader printer, a full feature research scanner, or anywhere in between and at anytime “toggle” to the automatic scanning of roll film.

The Auto-Scan™ software utilizes many of the standard features of the ScanPro 1000 making it possible to provide automatic roll film scanning at a fraction of the cost of conversion scanners, says Westoby (see SIDEBAR for ScanPro 1000 features). This new, low cost price point makes automatic scanning a good fit in applications that couldn't afford the cost of those high end scanners. Applications like inter library loans where the electronic exchange of information stored on microfilm is fast and convenient, preparing publications for the web, electronic posting of course reading and research materials.

The ScanPro 1000 is the all-in-one microfilm viewer, scanner and printer that uses cutting-edge digital technology and innovative design to provide quick, easy-to-use functionality in a unit that takes up as much space on a desk as two sheets of letter-sized paper. There is no other equipment that provides the capabilities of the ScanPro 1000, says Westoby. The ScanPro 1000 has been available for a little over a year and is rapidly becoming the microfilm equipment of choice when cost, performance, and ease-of-use is important. Westoby adds, we have been in the microfilm equipment business for over 25 years and having patrons refer to the ScanPro 1000 as equipment that makes using microfilm “fun-to-use” is an industry first.

In business since 1989, the E-Image Data group is an international manufacturer of microfilm scanning systems and digital reader printers. Their superior technology is patented and is the backbone of product lines sold under the E-Image Data brand and by the top OEMs and private label brands in the world.

### **ScanPro 1000 Revolutionizes Microfilm Scanning**

- High resolution scan of your microfilm in one second at all magnifications.
- Optical zoom lenses covers 7X to 100X. Standard @ 7x to 54x. Optional @ 10x to 100x
- Real time, live viewing of your high resolution images on your PC monitor.
- Single “CLICK” image correction.
- Use with all film types roll film, cartridge film, fiche, ultra fiche, microbooks, micro opaques, and aperture cards
- 360-degree optical image rotation and digital image rotation
- Secure screen mode for public use applications
- Customizable tool bars.
- Store and recall application settings.
- On-screen help for all controls.
- Software supports multiple languages.

**The ScanPro 1000 shown weighs just 19lbs, takes up the desk space of two sheets of letter-size paper, and uses less power than a 20 watt light bulb.**
